

Design Your Work

IMPROVING ENVIRONMENTS FOR LABORATORIES

PROMOTING COLLABORATION AND ENCOURAGING VERSATILITY

Case Systems meets the stringent demands of laboratory and high-tech environments by creating efficient, scientific-oriented workspaces that are flexible, attractive and durable. Our casework design facilitates research, promotes collaboration and provides the versatility to evolve with your facility's requirements.

By working with our extensive dealer network, we can transform your workspace by providing an excellent, long-term customer experience – from design to installation to years of continued satisfaction – as well as value-added solutions that increase productivity and control costs.

FLEXIBLE AND ERGONOMIC

Most laboratory facilities are designed for unique research requirements, and they also need to meet national, as well as international, scientific testing standards. Case Systems addresses these challenges by providing ergonomically designed, height-adjustable products that are customizable and adapt to laboratory personnel and equipment needs, as well as Americans with Disabilities Act (ADA) requirements.

Our laboratory offerings include:

- Height-adjustable workstations
- Overhead service (WING® and SKYCAP®) distribution systems
- Mobile, fixed and rail-mounted casework
- C-frames
- Work surfaces
- Specialty products

From the beginning of each project, we work closely with you to review your facility's needs so we can deliver the casework, workstations and complementary products that create a user-friendly lab environment that functions flawlessly and is adaptable to future needs. In addition, our construction specialists can guide you on how the use of our products can contribute to Leadership in Energy and Environmental Design (LEED®) credits that impact project certification.

MAINTAINING A FUNCTIONAL WORK ENVIRONMENT

Almost every laboratory facility needs to maintain a pristine work environment to ensure optimal results. So it's crucial that your casework's quality and workmanship can meet the most stringent scientific requirements. Case Systems meets these needs and more with products that are constructed from the latest substrates, laminates and hardware.

When compared to other casework products, Case Systems provides superior chemical, wear and impact resistance. In addition, they are low maintenance and, most importantly, easy to clean. We also value aesthetics in the workplace and offer hundreds of laminates and standard edge colors to choose from.

CASE SYSTEMS CASEWORK IS SEFA 8 CERTIFIED

Case Systems is a long-standing member of the Scientific Equipment and Furniture Association (SEFA). This organization promotes leadership through the creation of laboratory solutions by combining organizational, technological and environmental systems that respond creatively to strategic business issues. Case Systems' cabinet construction methods are SEFA 8 certified.

PROTECTION FROM THE UNSEEN

By selecting Case Systems, you can also choose an added layer of protection. Our ÆGIS Microbe Shield® program helps protect your casework from bacteria and other microbes that cause staining, deterioration and odors, while providing additional value, year after year.
