

Saginaw Bay Dermatology

CHALLENGE:

Large hospitals and clinics are not the only healthcare environments that need to be functional and flexible to meet the diverse needs of their patients. A dermatology office in Bay City, Michigan, needed quality casework to equip their new, larger location.

PRODUCTS USED:

Project scope included 400 linear feet of plastic laminate casework and countertops for:

- Exam rooms
- Procedural rooms
- Pharmacy storage room
- Kitchen area
- General healthcare rooms

RESULTS:

The installation process went smoothly, and the casework has proven to be functional and durable.

A new space means new opportunities. When Saginaw Bay Dermatology decided to move their office to a larger space, they needed to organize their space to be both functional and flexible in order to meet diverse client needs.

Saginaw Bay Dermatology needed casework that:

- Met diverse needs
- Was aesthetically pleasing
- Could withstand the heavy use and frequent cleaning required in the medical environment

“We needed quality casework throughout our new, larger facility, including exam rooms, procedure rooms, a pharmacy storage room and a kitchen area. We found Case Systems Solutions online, and they seemed like an ideal fit since they are local and deliver quality work from start to finish of a project,” said Mardi Pavlichek, Saginaw Bay Dermatology Project Manager. “Amidst the pressures of the move, Case Systems Solutions helped us efficiently design our new space and install quality casework and countertops. The team was knowledgeable and responsive, and we are very pleased with the results.”

Saginaw Bay Dermatology worked with Case Systems Solutions – Case Systems’ Michigan direct link – to find the ideal casework from Case Systems. The project scope included 400 linear feet of plastic laminate casework and countertops for:

- Exam rooms
- Procedure rooms
- Pharmacy storage room
- Kitchen area

Saginaw Bay Dermatology’s new office, completed in June 2010, provides diverse dermatology services for Bay City area patients, from cosmetics to medicinal needs.
